Task: Local Database App (using Hive or SQFLite)

Your task is to build a small Flutter app that uses local storage through either SQFLite or Hive.

:white_check_mark: What you need to do:

- Choose any app idea you like (e.g., budget tracker, recipes, etc.).
- Use a local database to store and retrieve data.
- The app must include basic CRUD operations (Create, Read, Update, Delete).
- Implement both Light and Dark themes, and allow switching between them.

:no_entry_sign: Important notes:

- Do not make a notes app.
- Do not copy a full project from YouTube or any other source — I'll be able to tell.
- If you submit a copied app or a notes app, it will be marked as not accepted.

:dart: The goal of this task is to evaluate:

- Your ability to build a complete small app from scratch
- How you structure your code and manage the database layer
- Your creativity in choosing and implementing an idea
- Your ability to handle theme management (Dark & Light modes)

:alarm_clock: Deadline: Saturday at 4:00 PM

If you have any questions or need help with your idea, feel free to ask. Good luck!
